Additional optional information on source reduction, recycling, or pollution control activities.
Metal slag/sludge that at one time was characterized as a hazardous waste and transferred off site (2008 and the years prior) or treated on site (mid-2008 through 2010) is now characterized as a non-hazardous material and considered a by-product and is fully recycled as-is off site (2011 to current).

Miscellaneous, additional, or optional information regarding the Form R submission
Much more metal containing manganese and manganese compounds (e.g., stainless steel and copper-nickel alloys) was processed in 2013 over 2012; therefore, attributing to the significant increase in production ratio.
